Product: Landing Party

Launched in November 2026, Landing Party is the world's first outdoor roleplaying game. It uses augmented reality to place an entire game world into your local park or back yard. Its 10 missions show a variety of roleplaying adventures: mazes to walk through, a shooter mission, a puzzle mission, an exploration mission, and more.

Landing Party is available for smart phones on Apple App Store and Google Play, and now it is also available on XREAL AURA wired XR glasses. Landing Party is the world's first outdoor roleplaying game. See our vision.

Its technology, including 8 patents:

- Adapts a game mission to fit a real world space of any shape or size,
- Allows players to manually move the game around obstacles such as park benches and bushes, and
- Prevents players from cheating by walking through walls and other 3D game obstacles.

Monsarrat is already growing out Landing Party with more adventures and a roleplaying story. Next, the company will spin out its technology into a game development platform, so that other game makers can create outdoor video games.

See game footage in our press kit or on our YouTube channel.
